B.Sc. DEGREE PROGRAMME IN COMPUTER SCIENCE

SYLLABUS WITH EFFECT FROM 2023-2024

Year: I

Semester: II

Year: I		Semester: II
Introduction to Computer Architecture and Microprocessor		125C2A
Credits 5	Lecture Hours:4 per week	
Learning Objectives: (for teachers: what they have to do in the class/lab/field) • To introduce the internal organization of Intel 8085 Microprocessor. • To enable the students to write assembly language programs using 8085. • To interface the peripheral devices to 8085 using Interrupt controller and DMA interface.		
Course Outcomes: (for students: To know what they are going to learn) CO1: Remember the Basic binary codes and their conversions. Binary concepts are used in Microprocessor programming and provide a good understanding of the architecture of 8085 CO2: Understanding the 8085 instruction set and their classifications, enables the students to write the programs easily on their own using different logic.. CO3: Applying different types of instructions to convert binary codes and analysing the outcome. The instruction set is applied to develop programs on multibyte arithmetic operations. CO4: Analyse how peripheral devices are connected to 8085 using Interrupts and DMA controller.
