Credits 5	Lecture Hours:4 per week
Learning Objectives: (for teachers: what they have to do in the class/lab/field) - To impart the basic concepts of data structures and algorithms. - To acquaint the student with the basics of the various data structures - This course also gives insight into the various algorithm design techniques	
Course Outcomes: (for students: To know what they are going to learn) CO1: To introduce the concepts of Data structures and to understand simple linear data structures. CO2: Learn the basics of stack data structure, its implementation and application CO3: Use the appropriate data structure in context of solution of given problem and demonstrate a familiarity with major data structures. CO4: To introduce the basic concepts of algorithms CO5: To give clear idea on algorithmic design paradigms like Divide and conquer and Backtracking,
